

This is the statement of general environmental policy of Kehui International Ltd.

William Kibart has overall and final responsibility for Environmental policy

Kehui International Limited is committed to minimising the impact of its activities on the environment.

The key points of its strategy to achieve this are:

- **Protection of our Environment:** We will minimise, and wherever possible, eliminate the release of any pollutant that may cause environmental damage to the air, water, earth or its inhabitants. We will ensure compliance with all relevant environmental legislation.
- **Sustainable Use of Natural Resources:** We will sustain the use of renewable natural resources wherever possible and will conserve non-renewable resources through efficient use and careful planning.
- **Minimisation and Safe Disposal of Waste:** We will minimise the creation of waste, and wherever possible recycle materials and encourage others to do likewise. We will dispose of our waste in a safe and responsible way. We will evaluate our operations and ensure they are as efficient as possible.
- **Recycling and Re-use:** We will actively promote recycling both internally and amongst our customers and suppliers.
- **Wise Use of Energy:** We will make every effort to use environmentally safe and sustainable energy sources. We will promote the benefits of improved energy efficiency amongst our staff.
- **Risk Reduction:** We will minimise the risk of environmental damage by employing safe technologies and operating procedures.
- **Delivery and Purchase of Safe Services:** We will deliver services that minimise adverse environmental impacts. We will seek good environmental standards from our suppliers. Wherever possible and within the terms of the law, we will make provision to ensure that contractors working on the company's behalf apply environmental standards equivalent to the company's own.
- **Environmental Responsibility:** We will raise awareness amongst staff of environmental issues and enlist their support wherever practicable. We will commit the management and resources necessary to implement these principles.
- **Staff Training:** We will ensure that all staff and members are aware of their environmental responsibilities in terms of the principles within this Environmental Policy.
- **International Operations:** We will work with our principle supplier Kehui Power Automation of China, to promote this policy across the organisation.
- **Commitment to the Environment:** We confirm this is a long-term commitment and our practices will be adapted in line with advances in technology and new understanding in terms of environmental issues.
